

Breathe Well. Hear Well. Be Well.

ClariFix® for Chronic Rhinitis

ClariFix® cryotherapy is a long-lasting, effective treatment for chronic rhinitis that involves the use of freezing or near-freezing temperatures.

Balances out the nerves that are telling the nose to drip, run and swell

Interrupts the brain's signals and stops the source of symptoms

Do you have patients sneezing and wheezing with chronic rhinitis? Target the source of their symptoms for lasting relief.

Traditional treatments for chronic rhinitis may manage the symptoms, but they do not address the underlying problem.

ClariFix® is safe, FDA-cleared, and allows for minimal downtime and recovery.

During the procedure, patients may experience some discomfort, slight pressure and a cooling sensation in the nose and around the molars. Patients should not expect pain during the process, but here's what they can expect before and during the procedure:

- › Nasal cavity numbed with an anesthetic
- › ClariFix® device and endoscope placed in the back of the nose, where out-of-balance nerves are located
- › Cold therapy applied for approximately 30 seconds, 1 to 2 times per side

Following the procedure, patients can expect:

- › Temporarily increased congestion, resolving within half a day
- › Return to normal activities the same day as treatment
- › See improvements between 2 and 6 weeks post-treatment

In a clinical study, patients demonstrated the following results after treatment with ClariFix® cryotherapy:*

- › A statistically significant improvement in runny nose and congestion
- › 4 out of 5 [80% of] patients reported long-lasting symptom improvement
- › Similar improvement in both allergic and non-allergic rhinitis patients
- › Treatment was well tolerated, with no device or procedure-related adverse events

*K162608, Data on File: A2014-02 Clinical Report, Arrinex

Put an end to the source of your patients' frustrating symptoms with ClariFix® cryotherapy.
